

Target Audience Analysis

Introduction

Brief Overview

We are working on a game project that are similar concept of the overcooked game, instead this game is based on car/garage/shop game which the player gets a few tasks too complete for the car within a time limit and at the end he will get a highscore.

The game will be a board game hooked with and arduino and having a physical controller to move the physical car

The objective of this analysis is to examine if *competitive play* or *casual play* is mostly played by the GenZ generation. Our main focus is to figure out which of these 2 genre would fit our game the best

Target range age gap between 17-28

Purpose of Analysis: Explain why this genre is significant or of interest for your analysis. What do you hope to learn or demonstrate through this analysis?

Historical Context

First appearance

What is casual play game

Casual play game are game designed (which can be any genre) for a specific or mass audience offering a simple accesible gaming experience. Usually they are following a simple rule, short play sessions low skill requirement.

Background about this game genre

Casual games started with simple arcade games like pac man in 1980's and spread to computer through free games like windows solitaire and tetris etc, these were mostly arcade games or computer games

There were also casual board games back in the day that revolutionized into modern board games that is yet casual like for example monopoly , ludo , jenga etc.

What is competitive games

A competitive game is a form of play where a player or more can compete against other player or trying to achieve a higher score of play. Competitive gaming often involves skilled player who uses strategies and skill to achieve a better outcome or beat another opponents.

Background about this game

The Intergalactic Spacewar Olympics, held on October 19, 1972, at Stanford University, was the first organized video game tournament, marking the birth of competitive gaming.

Popularity of this game

Mechanics analysis

What is a core mechanic?

Core game mechanics are the fundamental actions in the game that players perform repeatedly that would shape the overall gameplay experience like for example in a platform game player would need to run and jump on different platform level to reach a certain goal, this would eventually turn into a cycle and it would become what we would call a gameplay loop in simple terms.

Gameplay Loop

In our game the core mechanics would be that the player would receive an order for the car and the player would move around the map to complete these tasks as fast as possible and deliver it to the goal and proceed the next one.

Thematic Elements

Common themes

Games like Overcooked share same common narrative genre and applying this to our game I need to ask if [is overcooked casual or competitive ?](#)

Well This answer is not a simple yes or no because looking at a game like overcooked it basically is a mix of both , while it is simple enough for player to understand the core loop mechanics , the game itself encourage the player to try to complete as many orders as possible and at the end try to reach higher score and there is also multiplayer versus mode where player can race against each other for a higher score.

So to answer this question , it is a mix of both.

What is the difference between these two

Why is competitive or casual play most played amongst our generation

Advice for our project

Conclusion
